

Goldeye

CL-008 Cool TEC1

- · Camera Link InGaAs camera
- QVGA resolution
- Strong fan cooling
- · No condensation
- Simple setup via GenCP
- 344 fps
- Low noise

See the invisible

Short-wave infrared (SWIR) cameras with InGaAs sensor technology

Goldeye CL-008 Cool TEC1 with FPA 320 \times 256 | 30 μ m | InGaAs runs 344.0 frames per second at 0.1 MP resolution.

Goldeye cameras are equipped with InGaAs sensor technology making them sensitive in the short wave infrared spectrum ranging from 900 nm to 1,700 nm. Some models have extended sensitivity in the visible spectrum down to 400 nm or up to 2200 nm. All Goldeye SWIR cameras can be operated at very high frame rates and capture outstanding low-noise images. They are the perfect choice for industrial and scientific applications beyond the visible spectrum. All Goldeye models are available with either a Camera Link or a GigE Vision interface.

Easy software integration with Allied Vision's Vimba Suite and compatibility to the most popular third party image-processing libraries.

AcquireControl adds extensive image analysis functions, such as:

- Pseudo color LUT with several color profiles
- Auto contrast
- Auto brightness
- Analyze multiple regions (rectangular, circle) within the image
- Real-time statistics and histogram display

The Modular Concept offers various options for lens mount, housing variants, optical filters, case design, and more. See the Customization and OEM Solutions webpage for additional options.

Specifications		
	_	

Interface Camera Link Base
Resolution 320 (H) × 256 (V)

Spectral range 900 nm to 1700 nm

Sensor FPA 320 × 256 | 30 μm | InGaAs

Sensor type InGaAs

Sensor size No standard size

Pixel size $30 \mu m \times 30 \mu m$

Lens mounts (available) C-Mount

Max. frame rate at full resolution 344 fps

ADC 14 Bit

Image buffer (RAM) 256 MByte

Cooling temperature +5 °C (default and calibrated) | -5 °C, +10 °C, +20 °C (uncalibrated) | -5 °C, +10 °C, +20 °C (uncalibrated)

brated) | User configurable

Dark current 260 ke⁻/s (at +5 °C FPA temperature)

Temporal dark noise 1.6 ke⁻ (Gain0), 210 e⁻ (Gain1)

Saturation capacity 5.0 Me⁻ (Gain0), 170 ke⁻ (Gain1)

Dynamic range 70 dB (Gain1), 60 dB (Gain1)

Output

Bit depth 8 - 14 Bit

Monochrome pixel formats

Tap Geometry 1X 1Y: Mono8, Mono10, Mono12, Mono14 |

Tap Geometry 1X2 1Y: Mono8, Mono10, Mono12

General purpose inputs/outputs (GPIOs)

TTL I/Os LVTTL I/Os: 1 input, 1 output

Opto-isolated I/Os 1 input, 2 outputs

RS232 115 200 Baud, 8N1 (adjustable)

Operating conditions/dimensions

Operating temperature -20 °C to +55 °C (housing)

Power requirements (DC) 10.8 V to 30.0 V

Power consumption 10.5 W (at 12 VDC)

Mass 760 g (with C-Mount adapter)

Body dimensions (L \times W \times H in mm) 90 \times 80 \times 80

Quantum efficiency

Features

Image control: Auto

- Auto contrast
- Auto exposure

Image control: Other

- Background correction
- Binning
- DPC (defect pixel correction)
- LUT (look up table)
- Multiple ROIs (regions of interest)
- NUC (non-uniformity correction)

Camera control

- Acquisition frame rate
- Event channel
- Firmware update in the field
- I/O and trigger control
- Image chunk data
- Stream hold
- User sets

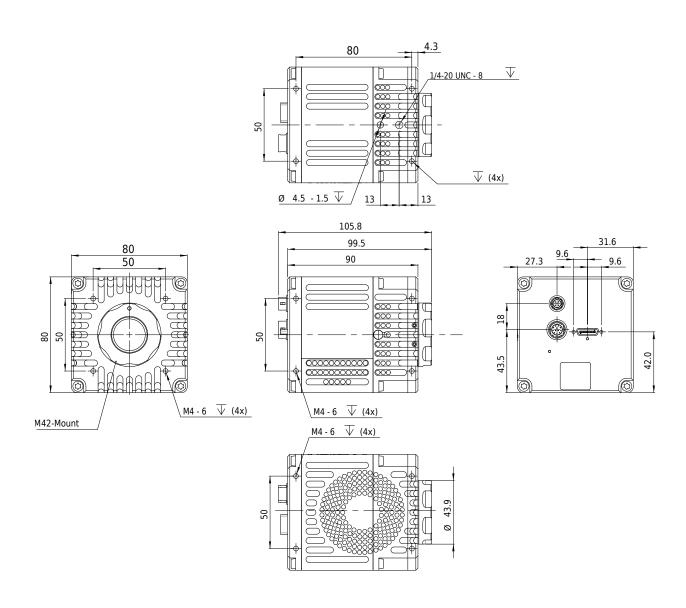

Sensor temperature control

- Temperature management by TEC
- Temperature status indicator

Technical drawing

Applications

Goldeye cameras are very sensitive in the SWIR spectrum. They can be used in an extended operating temperature range. Thanks to temperature stabilization and integrated image correction, Goldeye cameras achieve an outstanding image quality with little noise and a high dynamic range. They are well-suited for many typical SWIR applications in various industry branches:

- Semiconductor industry: solar cell and chip inspection
- Laser beam profiling and analysis
- Recycling industry: plastics sorting
- Medical imaging, sciences: hyper- and multi-spectral imaging, microscopy, optical coherence tomography (OCT)
- Metal and glass industry: thermal imaging of hot objects (250 °C to 800 °C)
- Agriculture industry: airborne remote sensing
- Printing industry: banknote inspection
- Electronics industry: laser beam profiling
- Surveillance and security: vision enhancement (for example, seeing through fog)

White Paper To learn more about typical application fields for SWIR cameras, download our White Paper: Seeing beyond the visible – short-wave infrared (SWIR) cameras offer new application fields in machine vision
